SUMMARY

Computer Science M.S. graduate with experience in IT support, full-stack development, and machine learning. Built applications and AI models using Python, JavaScript, React, Node.js, and MongoDB, including data-driven and user-facing systems. Strong problem-solving skills with a focus on practical implementation.

EXPERIENCE

PORTS AMERICA (PNCT), Newark, New Jersey

Operations Manager, present

- *Manage inbound and outbound gate operations for truck drivers picking up and unloading cargo at the port.*
- *Monitor camera systems and gate activity to prevent truck backups, improve traffic flow, and support safe operations.*
- *Developed database-driven report automations to speed up reporting processes and reduce manual work.*
- *Collaborate with IT teams on technology improvements, process enhancements, and system upgrades to improve departmental efficiency.*

NEW JERSEY INSTITUTE OF TECHNOLOGY, Newark, New Jersey

Information Technology Support Specialist, 2023

- *Resolved an average of 25+ support tickets weekly for a population of over 8,000 users.*
- *Configured and maintained 300+ hardware/software systems across classrooms and labs.*
- *Streamlined technical documentation and improved turnaround time for common IT requests by 30%.*

LOYOLA UNIVERSITY MARYLAND, Baltimore, Maryland

Information Technology Support Specialist, 2019-2023

- *Diagnosed and resolved issues for 200+ unique users in a fast-paced university setting.*
- *Set up and deployed over 120 faculty and student workstations, reducing average setup time by 20%.*
- *Contributed to restructuring service response workflows, improving ticket resolution efficiency by 15%.*

USA HOCKEY, New Jersey

Hockey Referee, 2016-2022

- *Officiated 400+ youth games for players aged 5–18 with zero reported safety violations.*
- *Coordinated with over 30 coaches and 100+ parents to maintain game integrity and enforce USA Hockey regulations.*

EDUCATION

NEW JERSEY INSTITUTE OF TECHNOLOGY, Newark, New Jersey

M.S. in Computer Science, 2024

LOYOLA UNIVERSITY MARYLAND, Baltimore, Maryland

B.S. in Computer Science, 2023

Minor: Statistics

PROJECTS

(Independent Projects)

[Port Operations Reporting & Analytics Application](#) (Python, React Native Web, Pandas, Matplotlib, PyInstaller), ongoing

- Demonstrated the working proof of concept to the operations department as a way to make reports faster and easier to prepare.
- Built a Python report engine and React Native Web interface that processes local CSV, Excel, and PDF files into 11 reports, tables, charts, and Excel exports.
- Added portable storage, import backups and rollback, saved-report history, raw-data search, ticket tracking, and Windows EXE packaging.

Stock Market Risk and Data analysis (Python with ML/DL Libraries), ongoing

- Scraped historical financial data using Selenium/WebDriver from online sources.
- Collected and structured daily stock price data for time-series analysis.
- Performed exploratory data analysis to identify trends and volatility patterns.
- Prepared datasets for downstream machine learning and predictive modeling.

(Natural Language Processing)

Text Classification Models | Python, scikit-learn, BERT (Python with ML/DL Libraries), 2024 NJIT

- Built and evaluated text classification models using Logistic Regression, SVM, and BERT.
- Preprocessed financial text data using tokenization and vectorization techniques.
- Compared model performance to improve classification accuracy.

(Deep Learning)

Animal Image Classification CNN | Python, TensorFlow/PyTorch (Python with ML/DL Libraries), 2024 NJIT

- Built and trained a convolutional neural network (CNN) for multi-class image classification.
- Trained model on 40,000+ labeled images across 100 categories.
- Achieved ~75% test accuracy using GPU-accelerated training.

(Artificial Intelligence)

AI-Stock Prediction Models (Python with ML/DL Libraries), 2024 NJIT

- Developed and evaluated 8 machine learning models for predicting stock prices across multiple companies (e.g., NVIDIA, Amazon, Tesla, AMD).
- Applied preprocessing techniques including MinMax scaling and standardization.
- Experimented with different prediction strategies, including single-target (closing price) and multi-target (high, low, close) predictions.
- Compared model performance to analyze the impact of different preprocessing and modeling approaches.

(Senior Design Project)

Finance Calculator Website (HTML, JavaScript, MongoDB), 2023 Loyola

- Developed a web-based financial calculator for time value of money and budgeting.
- Stored 500+ user calculations using a MongoDB backend.
- Designed a user-friendly interface for student use.

(Cryptocurrencies and Blockchain)

Crypto Token & Faucet Web App (Solidity, JavaScript), 2023 Loyola([Faucet](#))

- Launched an ERC-20 token and faucet on Sepolia testnet used by 25+ users.
- Built smart contracts and integrated with a React/Node.js frontend.
- Implemented MetaMask wallet connectivity for transactions.

TECHNICAL & INDUSTRY SKILLS

Languages: Python, Java, JavaScript, C, C++, Solidity, Bash, HTML/CSS

Frameworks & Libraries: React.js, React Native, Node.js, Express, Hardhat

Machine Learning: PyTorch, TensorFlow, Keras, Scikit-learn, Gymnasium

Databases: MongoDB, Oracle, MySQL

Tools: Git, GitHub Actions, Figma, Android Studio, VS Code, SQL Developer, XAMPP, Arduino IDE

Concepts: Object-Oriented Programming, RESTful APIs, Agile Development, Unit Testing, Version Control

Operating Systems: Windows, macOS, Linux

CLASSES TAKEN

Software Engineering/ Microprocessor-Based Systems/ Machine Learning/ Quantum Computing/ Cryptocurrencies and Blockchain/Computer Science Project / Discovering Information in data/ Operating Systems Design/ Data Management Systems Design/ Internet and Higher layer Protocols/ Artificial Intelligence/ Reinforcement Learning / Machine Learning/ Data Mining/ Deep Learning/ Natural Language Processing
